**High
Compatibility**

**Low Power
Consumption**

Air out, Freshness in!

The Vacuum Pump System is an innovative product designed to keep the freshness and nutrition of your food. It includes an unique handheld Vacuum Sealer that removes air from the patented jar and vacuum food bags.

The handheld Vacuum Sealer works with a variety of accessories. Once the air is removed, it forms a tight seal around the food. This system prevents oxidation & growth of bacteria, and keeps your food fresh 5 times longer than other traditional storage methods and nutrients are well retained even after storage.

Usage of VPA05

1. Add ingredients to the jar and close the lid.

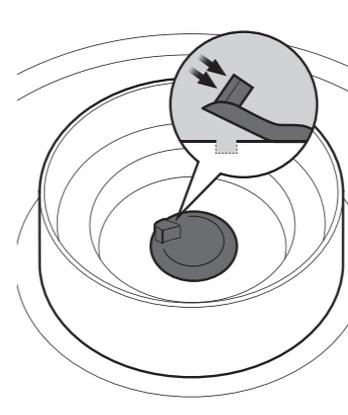

2. Put the VPA05 into the lid hollow.

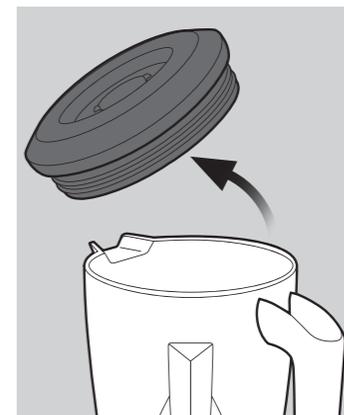

3. Turn it clockwise until it locks in the correct position.

Release Sealed Jar and Storage

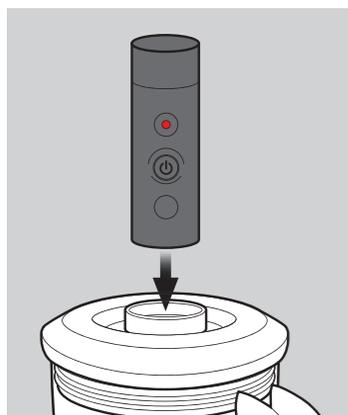

1. After blending, gently lift up one side of the rubber cover to release the pressure.

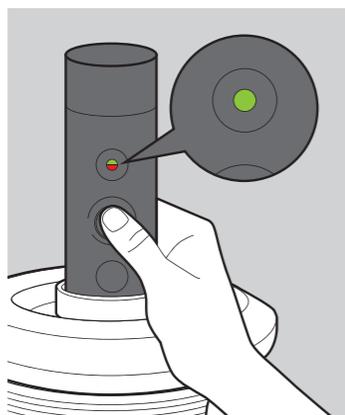

2. Remove the lid.

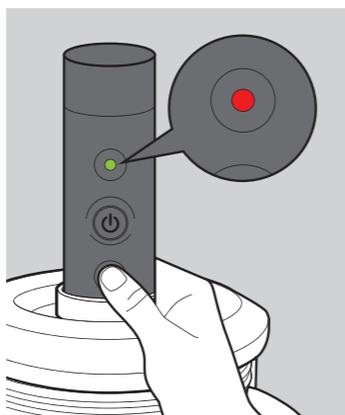

3. Pour out the blended ingredients into the vacuum storage container.

4. Put the vacuum pump onto VPA05.

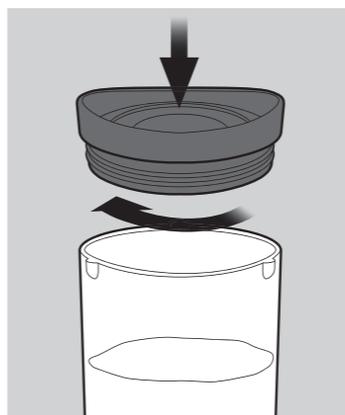

5. Press the power button once. Now the air gets pumped out. The indicator will show all green when finished.

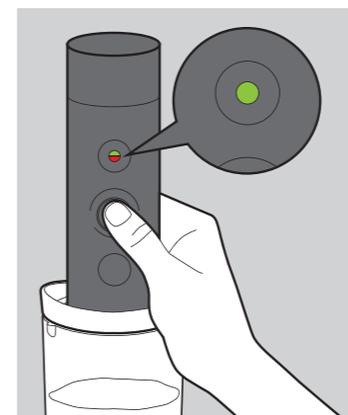

6. Press the pressure release button for a few seconds to release the pressure between the pump and accessory.

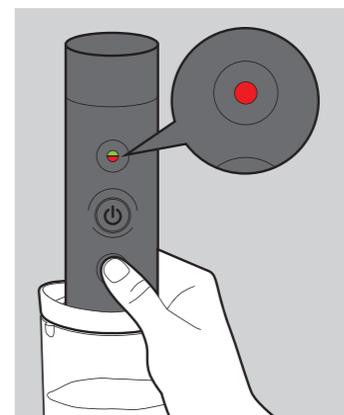

7. Now remove the pump and select a program or start the blending process manually.

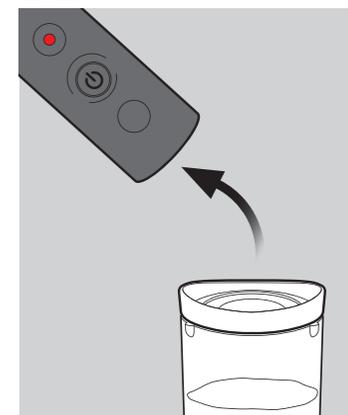

4. Close the vacuum storage lid and turn it clockwise to lock it tight.

5. Put the vacuum pump onto the lid, then press the power button once. Wait until the indicator shows all green.

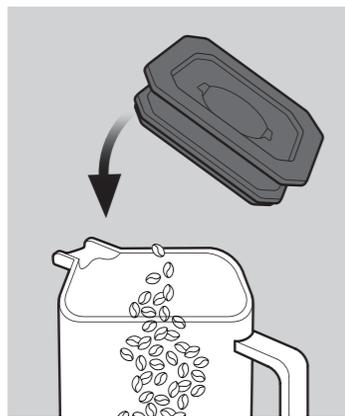

6. Press the pressure release button for a few seconds to release the pressure between the pump and the lid.

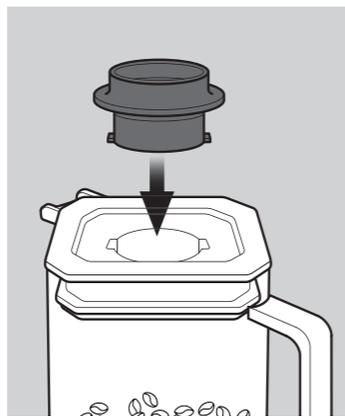

7. Now the pump can be removed and the container is ready for storage.

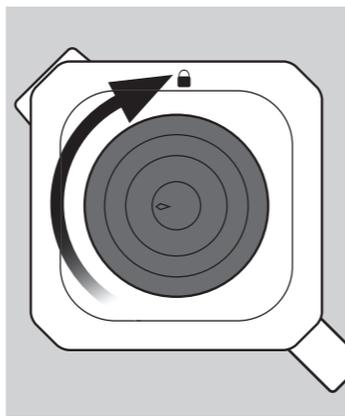

Usage of VPA01

1. Add ingredients to the jar and close the lid.

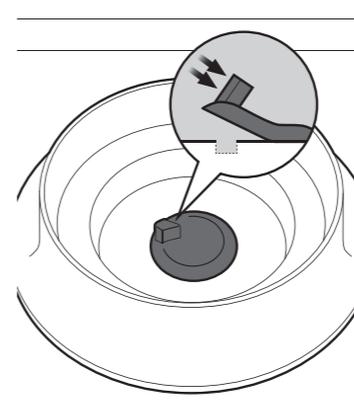

2. Put the VPA01 into the lid hollow.

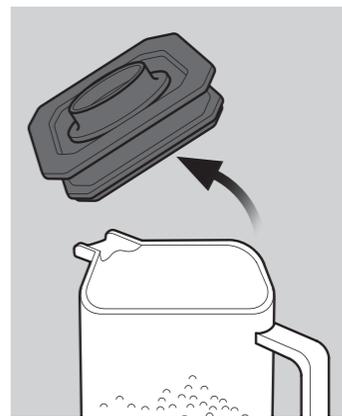

3. Turn it clockwise until it locks in the correct position.

Release Sealed Jar and Storage

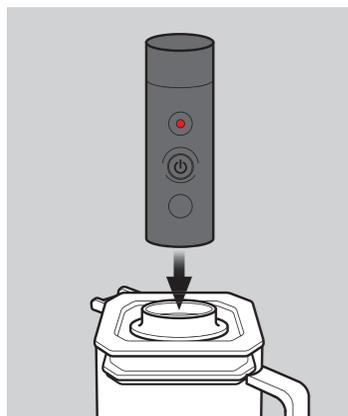

1. After blending, gently lift up one side of the rubber cover to release the pressure.

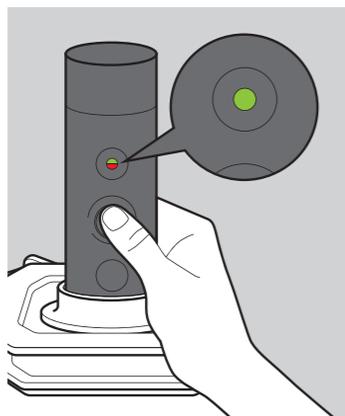

2. Remove the lid.

3. Pour out the blended ingredients into the vacuum storage container.

4. Put the vacuum pump onto VPA01.

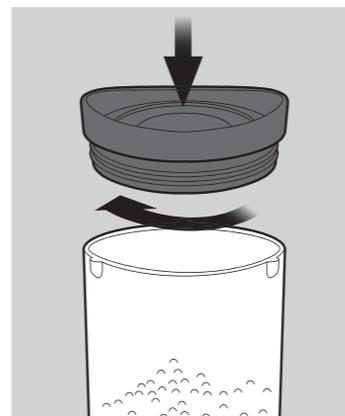

5. Press the power button once. Now the air gets pumped out. The indicator will show all green when finished.

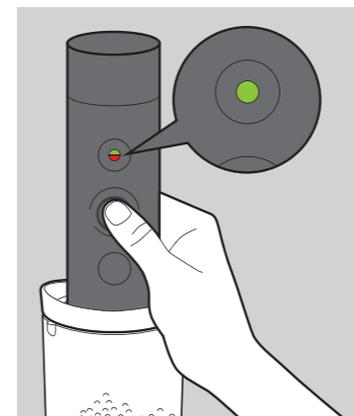

6. Press the pressure release button for a few seconds to release the pressure between the pump and accessory.

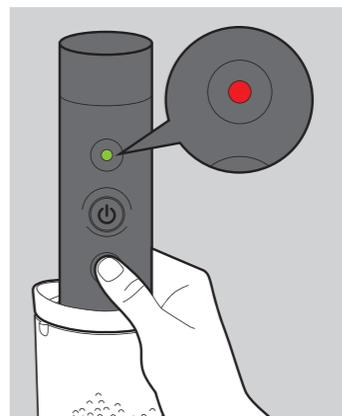

7. Now remove the pump and select a program or start the blending process manually.

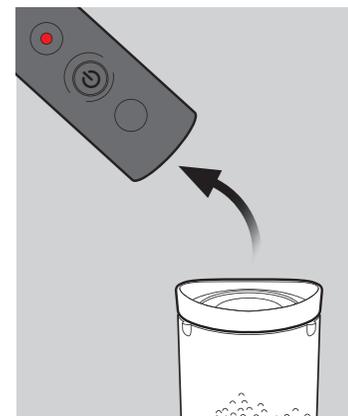

4. Close the vacuum storage lid and turn it clockwise to lock it tight.

5. Put the vacuum pump onto the lid, then press the power button once. Wait until the indicator shows all green.

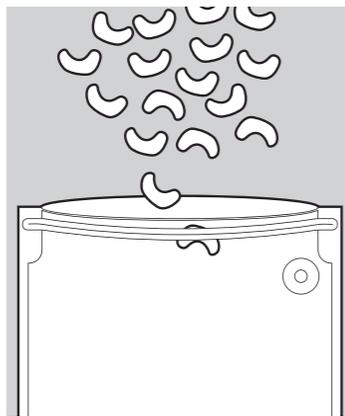

6. Press the pressure release button for a few seconds to release the pressure between the pump and the lid.

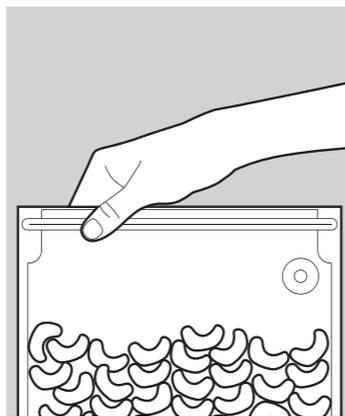

7. Now the pump can be removed and the container is ready for storage.

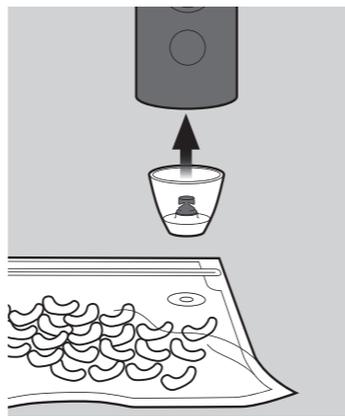

Vacuum Sealing with Foodbag

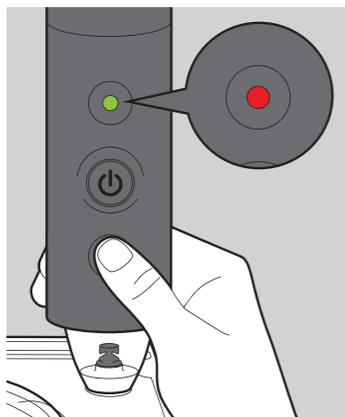

1. Put the food into the vacuum food bag.

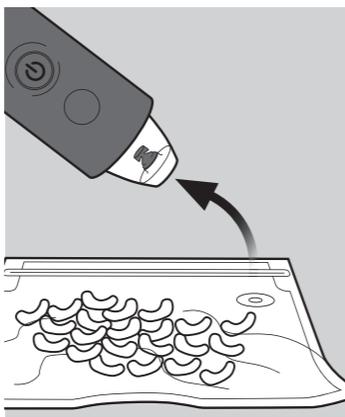

2. Pull the zipper.

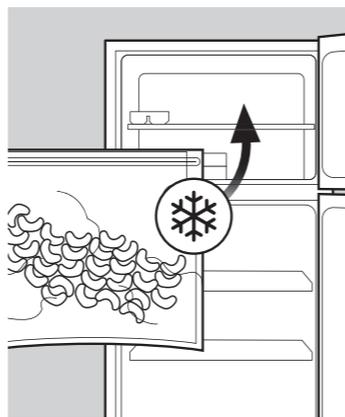

3. Place it on a flat surface and connect the accessory to the pump.

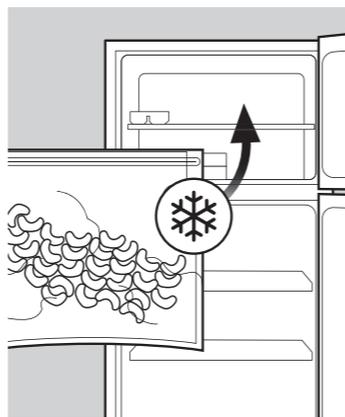

4. Place the pump on top of the air valve. Press the power button once. Wait until the indicator shows all green.

5. Press the pressure release button for a few seconds to release the pressure between the pump and the bag.

6. Remove the pump.

7. Now the food is ready for storage.

Safety instructions

- Read this manual carefully before using the vacuum pump and keep it for future reference.
- Before connecting the power supply to a power outlet, make sure that it has the same voltage and frequency as your power supply.
- Use the vacuum pump only with the supplied plug-in power supply.
- The vacuum pump is only suitable for domestic use.
- Always disconnect the plug from the unit and the wall outlet after usage or while cleaning the vacuum pump.
- Never immerse the vacuum pump in water or other liquids.
- When installing the vacuum adapter, make sure that it is firmly seated on the blender lid.
- Before using the vacuum pump, make sure that it will not fall over and that the vacuum adapter has been properly attached.
- Do not expose the vacuum pump to high temperatures, direct sunlight or other sources of heat.

Power supply

The vacuum pump can be operated with 6 pcs. 1.5V AA batteries * or alternatively with the supplied plug-in power supply. If you use the plug in power supply, the power supply is exclusively via this plug. The connector for the hollow plug is located on the back of the pump.

* Batteries are not included; The inserted rechargeable batteries (accumulators) are not charged by the connected plug-in power supply.
